

Filler Panel Installation

BEFORE REMOVING DRAWERS

Read through the instructions to familiarize yourself with the proper steps.

We suggest that you have a clean area to place drawers once removed. Avoid stacking drawers after removal to prevent damage.

Removal and installation of drawers should be done by two people.

NOTE These are general directions for installation. The configuration/size of your cabinet(s) will determine the type of filler panel provided.

STEP 1 Attach the filler panel to the cabinet prior to putting it in place. The panel has two sets of holes, one large and one smaller. The larger hole is to accommodate an extension bit to pass through the side of the panel to attach using a self tapping screw. Be sure the filler is flush with the cabinet before attaching.

STEP 2 Carefully set the cabinet in place once the filler panel has been fully attached.
